

Each pattern is precisely engineered and produced in modular staves for straightforward installation and flawless alignment. Every staff is grooved for secure jointing and dimensional stability.

As with all flooring we manufacture, every element is of engineered construction only, ensuring strength, balance, and resistance to movement.

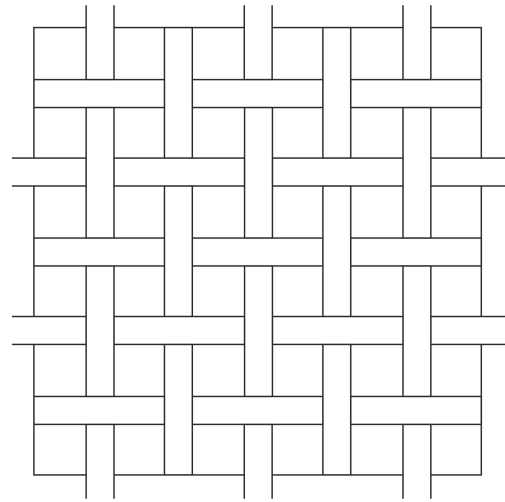

Parquet patterned flooring makes installation faster and easier for fitters, significantly lower material waste compared to fixed panel formats.

Geometrical elements within each design ensure exact repetition, clean intersections, and a seamless flow between adjoining sections, giving the floor a perfectly ordered visual rhythm.

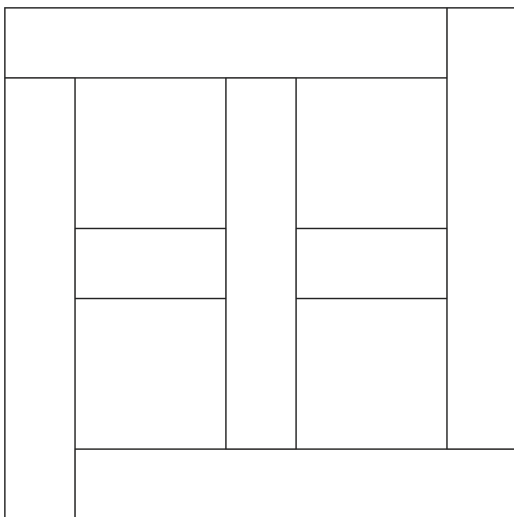

All parquet patterns can be scaled proportionally, allowing each design to be produced in a wide range of custom dimensions, from compact to large formats, adapted to the client's concept and the size of the space. Contact us for project-specific solutions.

Pattern panel flooring is supplied as pre-assembled, factory-finished units designed to deliver classic parquet formats with a high level of refinement. Each panel is produced with four-side grooves for secure jointing, accurate alignment, and a stable connection between adjoining sections.

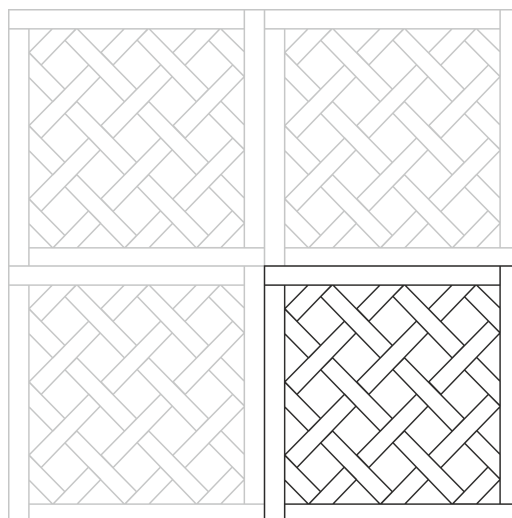

The geometry of the pattern is set during production, allowing every panel to maintain identical angles, intersections, and rhythm. This controlled approach supports a uniform appearance, especially in layouts based on traditional motifs such as Versailles, Chantilly, or other classic compositions.

Panel dimensions can be customised to suit project requirements, including overall size, pattern scale, and edge detailing. The engineered construction provides balanced performance and consistent behaviour across different environments.

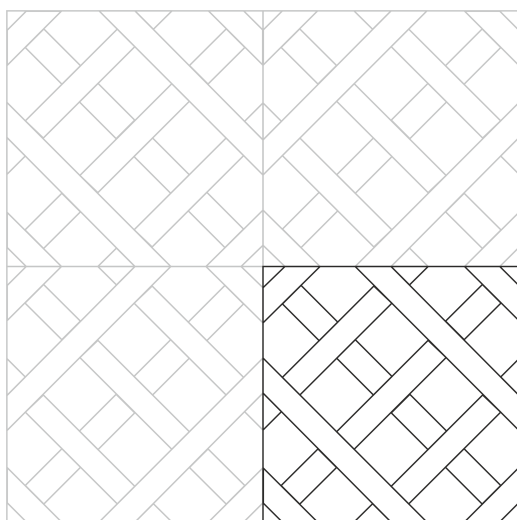

This format offers a clean and efficient installation process, a finished surface straight from the factory, and a level of visual sophistication associated with heritage parquet designs
